Advantages for suppliers

- Access to new markets
- Savings in marketing costs
- Feedback from the markets
- Suggestions for product improvement and development

Systems and projects

As system integrator we give our customers technical advice on design, engineering and installation of small and medium sized photovoltaic systems.

Quality through networks, experience and expertise

- International company structure
- Knowledge of local climate, energy data and conditions
- Excellent communication and processing skills thanks to our own regional sites (customs duties, taxes, logistics)
- ISO 9001 and AEO certifications
- Multinational experts team
- Extensive experience in the Off-Grid sector and in the field of international project management
- Individual sub-sector specialisation

All you need for your Off-Grid system

Phaesun have been specialising in the sales, service and installation of Off-Grid photovoltaics and wind energy systems since its foundation in 2001. We offer a sophisticated product and service portfolio for Off-Grid power supply. The Phaesun business activities include two divisions:

Component trading:

The Solar Components and Sales Division is responsible for worldwide wholesale distribution of selected, high quality Off-Grid products ranging from solar modules, electronics, DC loads and batteries to installation materials and complete kits.

Solar systems and projects:

The Solar Systems Project and Engineering Division is a service division, realizing entire projects for Off-Grid electrification including complete system engineering, sizing and design, selection and integration of components, export and installation supervision services.

Through the members of the Phaesun Group and our network of associated companies we have successfully supplied and managed hundreds of sustainable energy projects in more than 80 countries worldwide.
